EDUCATION

UC Berkeley

August 2024 – May 2028 (expected)

Bachelor of Science in Electrical Engineering and Computer Sciences

Berkeley, CA

- **Relevant Coursework:** Computer Architecture (CS 61C), Circuits and Systems (EECS 16B), Data Structures and Algorithms (CS 61B)
- **In Progress (Fall 2026):** Microelectronic Devices and Circuits (EE 105) - coursework includes Cadence and SPICE; Signals and Systems (EE 120); Hands-On PCB Engineering (HOPE)

PROJECTS

Pipelined RISC-V CPU | *Logisim, RISC-V ISA, Digital Logic*

Spring 2026

- Built a multi-stage pipelined CPU in Logisim that runs RISC-V instructions
- Designed the ALU, register file, branch comparator, and datapath, then put them together into a working pipeline
- Worked through timing and hazard issues between pipeline stages to keep the datapath correct

Guitar Amplifier and Effects Chain | *Analog Circuit Design, Op-Amps, Lab Instrumentation*

Fall 2025

- Built a full analog signal chain from guitar to speaker, testing and fixing each stage on the bench along the way
- Built the volume and tone controls, a treble boost pedal, and a power amp, all using op-amps
- Used KVL/KCL and filter design to figure out what was wrong when a stage wasn't behaving, then checked it with lab equipment

EXPERIENCE

iOS Developer

January 2025 – Present

MyShake, UC Berkeley Seismology Lab

Berkeley, CA

- Build features in Swift and SwiftUI for MyShake, a production earthquake early warning app
- Fixed a map performance problem: the app was recalculating the whole viewport up to 240 times per pan, added debouncing to cut that to once per pan, dropped update frequency from 60–120 Hz to 10 Hz
- Set up earthquake alerts using Apple's push notification service: a silent push wakes the app, pulls the event from the API, and the app decides whether to alert based on the user's saved location
- Built the map view in MapKit that shows live USGS earthquakes with shaking-intensity overlays

Web Development Intern

March 2022

Keiser Corporation

Fresno, CA

- Found and fixed bugs in the PHP back end and front end of a WordPress-based intranet site

LEADERSHIP & ACTIVITIES

Project Lead - Website Redesign

Fall 2026 – Present

Codify, UC Berkeley

Berkeley, CA

- Leading the redesign of the club's website, taking artistic freedom
- Member since Fall 2024; started in the club's education program, then worked as a developer for MyShake

SKILLS

Programming: Swift, C, C++, Python, Java, TypeScript, JavaScript, Git
